Georgia SoftWorks has published maintenance release v8.03.0019 for its GSW Telnet Server for Windows which includes both features and defect resolutions.

Georgia SoftWorks is committed to providing the very best Windows Telnet Server and Windows SSH Server for Windows on the market! This continuous improvement includes pioneering new features, listening to customer feedback and expanding the capabilities of the Georgia SoftWorks Telnet Server for Windows and SSH Server for Windows.

Due to the Georgia SoftWorks development and release generation methods and JIT User Manual production GSW software is released on a much more frequent basis than other organizations. As soon as features or defect resolutions are Alpha and Beta tested a release is generated. This provides Georgia SoftWorks customers with features much quicker than the "grouping" method used by other companies.

Version 8.03.0019 maintenance release published on February 23, includes both features and defect resolutions. "Existing users may determine if they are eligible to install the current version by reviewing the 'Free Updates until' field of the registration tool," said Diane Sexton. "With the continual changes in technology you may be missing out on great features that have come along in the past such as the Graphical User Interface (GUI) configuration tool implemented for UTS and or Windows CE 6.0+ client compatibility."

Customers are encouraged to contact Georgia SoftWorks to determine if a more current version of the software would be beneficial to their environment.

Established in 1991, Georgia SoftWorks is a privately held software development company recognized for creating high performance data communications, system and telecommunications applications. Georgia SoftWorks has obtained a worldwide presence with its industrial SSH/Telnet Server for Microsoft Windows. GSW's long-term commitment to SSH/Telnet has led to the pioneering of major features such as Session Shadowing, Session Monitoring, Graceful Termination, Automatic Logon, Logon Scripting and more recently Team Services technology which allows mobile device users to transfer, swap, share and recover mobile device sessions.
