

Georgia SoftWorks Announces Telnet Server for Windows Feature Release.

Georgia SoftWorks (GSW) is pleased to announce the latest feature release of Georgia SoftWorks [Telnet Server for Windows](#). Version 8.04.012 is now available for shipping and distribution.

Dawsonville, GA (PRWEB) May 23, 2013

Georgia SoftWorks is committed to providing the very best [Telnet Server for Windows](#) and [SSH Server for Windows](#) on the market! This continuous improvement includes pioneering new features, listening to customer feedback, and expanding the capabilities of the Georgia SoftWorks Universal Terminal Server (UTS).

[Version 8.04.0012](#) feature release published on April 25 validates the GSW UTS for the following operating systems: Windows server 2012, Windows 8 and Windows Small Business Server 2011. Additionally, GSW Windows CE client now supports AudioAPI32.dll on Motorola devices. Other highlights include, Support for Vanguard Voice System's AccuSpeech® technology, Support added for Windows PowerShell® and other custom shells, and GSWBell.exe utility which supports SAP bell operation after a reconnect when using Session Saver with SAPConsole.

"Existing users may determine if they are eligible to install the current version by reviewing the 'Free Updates until' field of the registration tool," said Diane Sexton of Georgia SoftWorks. "Customers are encouraged to contact Georgia SoftWorks to determine if a more current version of the software would be beneficial to their environment."

Established in 1991, [Georgia SoftWorks](#) is a privately held software development company recognized for creating high performance data communications, system and telecommunications applications. Georgia SoftWorks has obtained a worldwide presence with its industrial SSH2/Telnet Server for Microsoft Windows. GSW's long-term commitment to SSH2/Telnet has led to the pioneering of major features such as Session Shadowing, Session Monitoring, Graceful Termination, Automatic Logon, Logon Scripting and more recently Team Services technology which allows mobile device users to transfer, swap, share and recover mobile device sessions. GSW has also provided the very first SSH Server to provide Digital Certificate Authentication with an Internet Information Server (IIS) like certificate-to-user account mapping. This includes 'One-to-one' and 'Many-to-one' mapping methods and also supports certificate trust lists (CTL).

Configure Many-to-One Mapping

Four easy steps

- ✓ Open Mapping Tool and select Many-to-1
 - ✓ Name the mapping configuration
 - ✓ Create Element Rules
- Supply User Account credentials for logon

“ Customers are encouraged to contact Georgia SoftWorks to determine if a more current version of the software would be beneficial to their environment.
