

Georgia SoftWorks Team Services **SHARE** allows two devices to share a single session.

Today, Barry is working alone.

He has a truck mount scanner but will need a wireless mobile scanner for the hard to reach items.

Barry is issued another device.

However, when he connects to the server with the wireless device he realizes he has two different sessions.

However he needs the data entered from either device to go into the **same data entry screen**.

Was the System Administrator Required?
No

Barry remembers **GSW Team Services**

Barry can **SHARE** his truck mount device session with the wireless mobile device.

EMPOWER the Mobile Device Users to Increase Productivity

Using Team Services

From the truck mount device session, he goes into Accept SHARE mode

Using Team Services

From the wireless mobile device session, he identifies sessions available to share and SHARES the truck mount session.

How Long did it take to SHARE?
Less than a Minute

Was the System Administrator Required?
No
